Abstract

This document provides an update on the status of Numbering Plan Area (NPA) code assignments in the North American Numbering Plan area.

Letter Information (Includes safety liability disclaimer (if applicable), ordering information, originator's signature information)

This document is the annual status report to the industry on Numbering Plan Area (NPA) codes.

This report was prepared by Jim Deak. Questions should be directed to Jim on (201) 740-4594.

1. Introduction

This report, published annually in January, provides an update on Numbering Plan Area (NPA) code assignments.

On January 1, 1995, the North American Numbering Plan (NANP) underwent the most significant changes ever since its inception in 1947, including a change to the format of NPA codes. Information on this change is included in Section 2 of this report. The new NPA code format makes 640 additional codes available for use, substantially extending the life of our current ten-digit telephone numbers.

By the time you read this report, several of the new NPA codes will be in place, and many more are scheduled for introduction in 1995. Specifics can be found in Section 5 of this report.

Several of the new NPA codes in 1995 will be introduced as overlay codes. Section 3 of this report explains what an overlay is and compares it with NPA splits and boundary realignments.

Each year Bellcore conducts a survey to determine which NPAs will be exhausting. Section 6 of this report lists the NPAs projected to exhaust within the next ten years.

Changes in the NANP have required changes in the dialing plans in many of the countries/states/provinces that share the numbering plan. The new dialing plans are summarized in Section 9.

We get many calls asking for clarification about the roles of the various groups involved in number administration. Here is some background information we hope will be helpful. When AT&T introduced the NANP in 1947, they established a two level administrative structure. AT&T itself administered NPA codes centrally, and the local exchange carriers administered the central office codes and line numbers within their service areas. Coincident with the divestiture of the Bell System in 1984, the Court assigned AT&T's responsibility for central number administration to Bellcore. Bellcore's role includes assignment of NPA codes, carrier identification codes, and other numbering resources that lend themselves to centralized administration. The Bellcore group responsible for central administration is known in the industry as NANPA, short for NANP Administration.

Although seven-digit local telephone numbers are administered by local exchange carriers, Bellcore's Traffic Routing Administration (TRA) group maintains a database of central office code assignments, and publishes this information in many forms for use by the industry. Call the TRA hot line on (201) 740-7500 to request a copy of their product catalogue.

NANPA assigns many of the resources under its control using industry-consensus assignment guidelines developed by the Industry Numbering Committee (INC), a standing committee of the Industry Carriers Compatibility Forum. For more information about the INC, contact one of its secretaries, Dawne Drake, on (201) 740-4657, or Kathy Cullen, on (201) 740-3571.

The Federal Communications Commission has asserted plenary jurisdiction in numbering and maintains a strong interest in numbering issues. The FCC staff contact is Peyton Wynns, Chief of the Industry Analysis Division in the Common Carrier Bureau. Peyton can be reached on (202) 418-0942.

We hope that this report is useful to you. Please feel free to contact us with suggestions for how it can be made more useful.

2. Numbering Changes in 1995

Two numbering changes take place in 1995: a new format for NPA codes, and expansion of Feature Group D carrier identification codes.

NPA codes introduced after January 1, 1995 will be in a new format in which the middle digit may be any number 0 through 9, not just 0 or 1 as previously required. The change introduces 640 new area codes, increasing the capacity of the NANP from slightly less than one billion numbers to more than six billion numbers, enough to last well into the next century. AT&T and Bell Laboratories designed this change in the late 1960s, and the industry has been preparing for it ever since.

Implementation of the new NPA code format impacts every segment of the industry, and significant expenditures may be required. Modifications may be required in switching equipment hardware and software, operations support systems, and possibly customer dialing procedures. Customer premises equipment such as PBXs are almost certainly affected. All carriers and customer premises equipment owners were asked to take the necessary steps to ensure that their equipment will be able to process NPA codes by January 1, 1995.

A key effect of the change is that dialing of 1 + 7-digits for home NPA toll calls (or 0 + 7-digits) is *no longer permissible*. Areas previously using 1 + 7-digit dialing have changed the dialing procedures for these calls either by eliminating the "1" and dialing the calls as 7 digits or by dialing the calls as 1 + home NPA + 7 digits. The choice is made by the local public service commission. The option selected in each state, province, or country is described in Section 9 of this report.

As indicated above, PBXs and other customer premises equipment are likely to need upgrades. For example, some equipment may not recognize the new NPA codes and may attempt to complete the call after 7 digits have been dialed. Toll restriction features may currently block calls to NPAs in the new format. Accounting software may not process the new codes correctly. Customer premises equipment owners / administrators must contact the manufacturer of their equipment and software to discuss the exact changes required. Manufacturers may choose not to update some of their older equipment, and customers with such equipment need to budget and plan for the required replacements.

Expansion of Feature Group D carrier identification codes (CICs) to four digits will occur in the first quarter of 1995 when the supply of three-digit codes exhausts. The new carrier access code (CAC) for four-digit CICs is 101XXXX, where XXXX represents the four-digit CIC. There will be a permissive period during which both three- and four-digit CICs can be used. The FCC will determine the length of the permissive period. At the end of the permissive period, existing three-digit CICs will be expanded to four digits by prefixing them with "0". Check with your local exchange carrier to determine when they will be prepared to process four-digit CICs, as readiness dates vary. The introduction of four-digit CICs may also require changes to customer premises equipment. Again, check with your vendor to determine what must be done.

3. Methods of NPA Code Relief

NANPA assigns NPA codes to provide relief in geographic NPAs that will shortly be exhausting their central office codes. Relief can be accomplished through several methods: boundary realignments, splits, and overlays. These relief methods are briefly described below.

A *boundary realignment* involves shifting the boundary line between two adjacent NPAs, one exhausting and one with spare capacity. The effect is to shift some central office codes from the NPA that is exhausting to the NPA with spare capacity. Only the customers in the geographic area between the old and new boundaries are directly affected by this change, but they may have to accept new 10-digit numbers if their central office code involved is not available in the new NPA. Generally speaking, this method tends to provide shorter term relief and has been seldom used.

Until recently NPA relief has been accomplished primarily through NPA *splits*. In this approach, the exhausting NPA is split into two geographic areas, leaving the existing NPA code to serve, for example, the area with the highest customer density (in order to minimize number changes), and assigning a new NPA code to the remaining area. From a customer perspective, the disadvantage of a split is that approximately half of the people affected by the split must change to the new area code. The most difficult part of designing a split is to find a recognizable boundary that divides the exhausting NPA into two parts with roughly equal lifetimes. As some NPAs have decreased in size, this has become increasingly difficult to do.

To resolve this problem, the concept of an *overlay* has emerged. An NPA overlay occurs when more than one NPA code serves the same geographic area. In an NPA overlay, code relief is provided by opening up a new NPA code within the same geographic area as the NPA requiring relief. Numbers from this new NPA are assigned to new growth to all service providers. Ideally, the overlay method eliminates the need for customer number changes, and typically does not require, in itself, a permissive dialing period.

4. NPA Code Assignments Since 1984

The NANP was introduced in 1947. At that time 86 NPA codes were assigned to cover the continental United States and Canada. In 1957 Alaska and Hawaii were added, and in 1958 the 809 NPA was assigned to incorporate Bermuda and many of the Caribbean Basin islands. At this time the NANP serves the numbering needs of 18 independent countries. As time passed, additional NPA codes were assigned to provide relief in NPAs in which the supply of numbers was exhausting. The table below summarizes NPA relief activities completed since Bellcore became administrator of the numbering plan in 1984.

NPA RELIEF DATE	ORIGINAL NPA	NEW NPA
01/07/84	213	818
09/01/84	212	718
03/05/88	303	719
04/16/88	305	407
07/16/88	617	508
11/11/89	312	708
11/01/90	201	908
11/04/90	214	903
09/02/91	415	510
10/06/91	301	410
11/02/91	213	310
01/01/92	212, 718	917*
05/03/92	404	706
07/01/92	212#	718#
11/01/92	512	210
11/14/92	714	909
10/04/93	416	905
11/14/93	919	910
12/01/93	313	810
01/08/94	215	610

In the above table (*) indicates that 917 is an overlay to NPAs 212 and 718, and (#) indicates that the Bronx moved from the 212 NPA to the 718 NPA.

5. NPA Code Relief In Progress or Planned

NPA relief activities currently in progress or planned are shown in the table below.

NPA	LOCATION	RELIEF CODE	RELIEF TYPE	RELIEF DATE & START OF PERMISSIVE PERIOD	END OF PERMISSIVE PERIOD
708	Illinois	630	Overlay	01/07/95	Not applicable
205	Alabama	334	Split	01/15/95	05/13/95
206	Washington	360	Split	01/15/95	05/21/95
713	Texas	281	Overlay	03/01/95	03/01/96
602	Arizona	520	Split	03/19/95	07/23/95
303	Colorado	970	Split	04/02/95	10/01/95
813	Florida	941	Split	05/28/95	03/03/96
703	Virginia	540	Split	07/15/95	07/13/96
310	California	562	Overlay	09/02/95	Not applicable
615	Tennessee	423	Split	09/11/95	02/26/96
809	Bermuda	441	New/Split	10/01/95	09/30/96
305	Florida	954	TBD	1Q95	
404	Georgia	770	TBD	4Q95	
214	Texas	972	Overlay	2/96	
203	Connecticut	860	TBD	TBD	

In this table the "RELIEF DATE" column shows the date when callers can begin dialing the new NPA code. The "END OF PERMISSIVE PERIOD" column shows the date when all calls to the old or new NPAs must be dialed with the correct NPA code. TBD indicates "To Be Determined," i.e., information was not available at the time this report was published.

6. NPA Codes Projected to Exhaust by 2005

NANPA, in its role as administrator of the numbering plan, prepares an annual survey projecting when each existing NPA will exhaust its supply of 792 central office codes. The information is useful in planning for future NPA relief activities. The table below identifies NPAs that are projected to exhaust within the next 10 years based on information forecasted by service providers in each NPA.

STATE, PROV. OR COUNTRY	NPA	PROJECTED EXHAUST	STATE, PROV. OR COUNTRY	NPA	PROJECTED EXHAUST
South Carolina	803	1996 1Q	Michigan	810	2000 4Q

9. Dialing Plans

The table on the following pages contains the dialing plans for the area served by the North American Numbering Plan (NANP). The table includes changes made in anticipation of the implementation of Interchangeable NPA codes as previously mentioned. The information entered in the matrix is the predominant method of dialing at each location. There may be instances where the dialing plan of a community within an NPA may be different than the general dialing procedure for that NPA.

The following are definitions of headings and abbreviations used in the table:

LOCATION:	The state, province or country for which the dialing plan is being provided.
NPA CODE:	The NPA code for the LOCATION.
HNPA LOCAL:	The standard procedure for dialing local calls (generally calls that do not incur a toll charge) terminating within the home NPA.
HNPA TOLL:	The standard procedure for dialing toll calls (generally calls that incur a toll charge) terminating within the home NPA.
FNPA LOCAL:	The standard procedure for dialing local calls (generally calls that do not incur a toll charge) terminating outside of the home NPA, i.e., foreign NPA.
FNPA TOLL:	The standard procedure for dialing toll calls (generally calls that incur a toll charge) terminating outside of the home NPA, i.e., in a foreign NPA .
OPER. ASSIST.:	The standard procedure for dialing all operator assisted calls, including credit card, collect, and third party calls.
PERMISSIBLE HNPA LOCAL:	Although the standard procedure for dialing a home NPA local call is shown under the HNPA LOCAL column, it is also "permissible" for the caller to place the call using the method under this column.
PERMISSIBLE HNPA TOLL:	Although the standard procedure for dialing a home NPA toll call is shown under the HNPA TOLL column, it is also "permissible" for the caller to place the call using the method under this column.
PERMISSIBLE FNPA LOCAL:	Although the standard procedure for dialing a FNPA LOCAL call is shown under the FNPA LOCAL column, it is also "permissible" for the dialer place the call using the method under this column.
NA:	An entry of NA indicates that this option is not available for the LOCATION.

NANPA is not responsible for dialing plans which are typically established by local regulatory agencies. For the last word on dialing plans please consult your local telephone company or local regulatory agency.

9. NPA Maps

The following pages contain maps showing NPA boundaries in the countries that share the NANP. One map displays the NPAs for the U. S. and a separate map of Canada is shown on Supplement A. The complexity of the U. S. map has grown significantly in recent years, and we have found it necessary to provide supplementary maps for some areas. Alaska, Hawaii, the Caribbean countries and northeastern U. S. states are shown on Supplement B. Area details of Los Angeles, Illinois and Michigan are shown on Supplement C.

The NPA code maps in this report may be reproduced for publication provided that the following statement appears on the copy:
